

Younghun Choi is South Korean carbon market analyst at ICIS, Reed Elsevier, exclusively covering South Korea ETS. The scope of his work ranges from energy market analysis to emissions and price forecast. Since his joining ICIS Germany he made a press release on the Korean emissions trading scheme, and built micro-economic projection models, i.e. emissions forecasting model, specific to South Korea. He now provides stakeholders with his research outcome in the form of reports and database via ICIS Korea Portal. He studied Accounting and Finance at London School of Economics with an academic focus on capital market and risk analysis.
