With the objective of facilitating implementation of transformational NAMAs, studies turned out to be particularly exciting this year. For the first time we will have a great opportunity to take stock of the developments of carbon markets in Asia over the last 12 months.

The recently adopted Paris Agreement aims to strengthen the global response to the threat of climate change, in the context of sustainable development and poverty eradication efforts. Noting the political priority, the high level segment focuses on the regional development agenda in the Asia-Pacific, challenges and carbon markets and highlights opportunities for cooperative climate action, and Carbon Market Initiatives Worldwide.

Carbon markets now cover 40% of global GDP according to ICAP. The newborn Korean carbon market, the first of its kind in Asia, has just completed its first compliance cycle and is already undergoing a significant reconfiguration. This session will address what can we expect from the 39th ICAO's General Assembly later this year, and what are the implications for airlines? What are the sticking points in the negotiations? It will also look at what is the position of the main ICAO Parties ahead of ICAO's General Assembly? And can the aviation sector present a relevant source of demand for carbon credits?

Carbon pricing and carbon markets are growing trends in Asia and an important tool for achieving the climate targets in Asia. The annual update of the IETA-EDF's The World Carbon Markets Case Framework Partnership Closed Session 1: Nairobi (Room 401 A)
