			Portugal has committed to being carbon neutral by 2050. Reaching net-zero carbon emissions will present both a significant opportunity and an enormous challenge – both economically and socially – as a successful transition will require close between policy, technology and capital, as well as an effective engagement of both public and private sector.	
			This event is part of a series of thematic events on the decarbonization of society within the framework of the Roadmap to Carbon Neutrality 2050. The event will focus on issues of social transition surrounding the output of the carbon neutrality roadmap. The work being developed in the context of the RNC2050 and the relevance of the just transition theme for the RNC will also be presented at the event.

			European power sector emissions have decreased for the last six years in a row, whereas the latest data indicates industrial carbon emissions are going in the opposite direction. Decarbonising these sectors, whilst protecting jobs and growing the economy, will be the major climate challenge for Europe over the next decade. This session will look at how the EU ETS can simultaneously drive industrial decarbonisation and finance innovation in new, low carbon technologies.

This plenary will discuss the outcomes of COP24 and focus on what is needed to take Article 6 over the finish line in Santiago, analysing the way forward for markets.

Ballroom Pedro Leitão, Upper Level	14:00	15:15	What are the Prospects for Future Links to the EU ETS?		
			The European carbon market is on track to link to the Swiss ETS in early 2020, which will constitute the first link between the world's largest carbon market and another national cap-and-trade system. Meanwhile, 2018 saw announcements between the EU and California, China and New Zealand on closer carbon market cooperation. This session will explore the possibility for more linkages to the EU ETS in the future, and the benefits this could bring.

Ballroom Pedro Leitão, Upper Level	15:30	16:30	Brexit: Boom or Bust?		
			Depending on the outcome of Brexit, the UK may leave the EU ETS and implement a carbon tax, or create its own domestic carbon market which could link back to the EU system. Such a development would be unprecedented for the world's largest carbon market, which has only ever seen new countries join. Important questions will need to be addressed such as what impact this would have on UK emissions, could a domestic UK carbon market be established in time and what challenges would need to be addressed to link it to the EU ETS?

Fernando Pessoa II, Lower Level	15:30	16:30	Complementary or Overlapping? The Power & Peril of Additional Policies		
			Despite the recovery of European carbon prices and the reinvigoration of the market, some Member States are pursuing domestic measures – such as carbon price floors and coal phase-outs – to speed up the rate of decarbonization. These developments, along with higher European renewables and energy efficiency targets agreed in 2018, could destabilize the supply-demand balance in the EU ETS. This session will contrast the approach Europe is taking to address this problem, with the approaches being used in other jurisdictions such as the USA and China.

Ballroom Pedro Leitão, Upper Level	16:45	17:45	Creating Vibrant Carbon Markets to Scale Voluntary and Compliance Climate Action		
			There is great momentum in the private sector to move towards net-zero emissions in support of global climate action. Carbon credits have an important role to play in delivering more ambition. This session will explore ways in which offsetting currently intersects and blends with compliance and voluntary frameworks around the world. From pure voluntary action, through voluntary action combined with compliance, through to full compliance at scale, resilient markets have the power to unlock potential and maximize mitigation.

Fernando Pessoa II, Lower Level	16:45	17:45	Analysts' Review and Price Outlook		
			After a year in which prices for EU allowances trebled, the EU ETS has seen more stable prices in 2019. Emissions prices around the world are moving in different directions, driven by domestic concerns and policies rather than the global climate outlook. What are the key elements of price formation and discovery in each of the main markets? How are analysts viewing the data on 2018 emissions, and what are the prospects for EUA prices for the rest of 2019 and into the future?
